

Video Conferencing Platform

(Zoom Clone)

SDE Fullstack Assignment

Description

Build a functional **video conferencing web application clone of Zoom web app** that replicates Zoom's design, user experience, and core meeting workflows.

The platform should allow users to create meetings, join meetings, schedule meetings, manage participants, and experience a clean, professional interface as original Zoom.

Your implementation should visually and functionally feel as a modern **Zoom Meeting Platform**.

Note: Your application should match the original application in terms of UI and UX, look and feel should be exactly the same.

AI Tools Usage

You are **allowed and encouraged** to use AI tools such as ChatGPT, Claude, GitHub Copilot, Cursor, or any other AI assistants for development. However, you **must understand every line of code** you submit and be prepared to explain your implementation decisions during the evaluation interview.

Technical Stack

- **Frontend:** Next.js (Single Page Application)
- **Backend:** Python with FastAPI/Django
- **Database:** SQLite (design your own schema)

Core Features (Must Have)

1. Landing Dashboard

Create a Zoom dashboard/homepage.

Requirements:

- Clean professional Zoom UI
 - Navbar with profile/settings placeholders
 - Buttons for:
 - New Meeting
 - Join Meeting
 - Schedule Meeting
 - Upcoming meetings section
 - Recent meetings section
-

2. Instant Meeting Creation

Requirements:

- Create a new meeting instantly
- Generate unique Meeting ID
- Generate shareable invite link
- Redirect user to meeting room

3. Join Meeting

Requirements:

- Join using Meeting ID or invite link
- Enter display name before joining
- Validate meeting existence

4. Schedule Meetings

Requirements:

- Create scheduled meetings
- Title / Description
- Date & Time picker
- Duration
- Auto-generate meeting link
- Store in database
- Show in Upcoming Meetings section

Good to Have (Bonus)

- Responsive design (mobile, tablet, desktop)
- User authentication (Login/Signup)
- Host controls (mute all / remove participant)

Important Notes

- **UI Design:** Your application should totally resemble Zoom's design. Study Zoom's UI carefully before starting.
- **No Login Required:** Assume a default user is logged in. Focus on the functionality rather than authentication.
- **Sample Data:** Seed your database.
- **Database Design:** Design your own database schema. This will be evaluated.
- **README File:** Include setup instructions, tech stack used, and any assumptions made.
- **Original Work:** Plagiarism from existing repositories will result in immediate disqualification.

Submission

- Upload your code to GitHub and ensure the repository is **public**
- Deploy your application (Vercel, Netlify, Render, Railway, or any cloud service)
- Submit both the GitHub repository link and the deployed application link

Evaluation Criteria

Criteria	What We Look For
Functionality	All core features working correctly
UI/UX	Visual similarity to Zoom's design and UX patterns
Database Design	Well-structured schema with proper relationships
Code Quality	Clean, readable, and well-organized code
Code Modularity	Proper separation of concerns, reusable components
Code Understanding	Ability to explain your code during evaluation

Timeline

Submission Deadline: 1 days from the date of receiving this assignment

Good luck!
